This Service Manual offers you a quick and convenient reference in a single short book for the six models listed above as well as on the front cover. General information common to all the models is provided in such a convenient manner.

Model-specific information is identified with appropriate indications. In addition, the detail Parts List in the PC board identifies each model with its mark or SYMBOL.

Before referring to other parts of this Service Manual, check again the above table for models applicable to the services.

SUMMARY

1. REMOVING THE TOP COVER AND FP ASSY (FIGURE 1)

- 1) Remove the screws.
- ② Remove the Top Cover.
- ③ Remove the FP Assy, held in position by the eight prongs, the direction of arrow.
- 4 Remove the Bracket.
- ⑤ Remove the Sub PCB, if one is attached, from the Main PCB.

2. REMOVING THE MAIN PCB AND THE DECK MECHANISM FROM THE CHASSIS (FIGURE 2)

- ⑥ Disconnect the Power Cord from the chassis.
- (7) Remove the three screws.
- ® Remove the MAIN PCB include Deck Mechanism from the three prongs on the chassis.
- Operations can be performed with the outside of the chassis in this condition as long as the power cord is not removed from the main PCB. Also, turn the foil side of the main PCB upside down during maintenance.

3. REMOVING THE DECK MECHANISM FROM THE MAIN PCB (FIGURE 3)

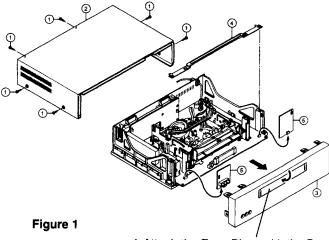

- Disconnect the Flexible Wire from the CTL Head PCB.
- 1 Disconnect the QS-Connector from the Motor PCB.
- ① Disconnect the Flexible Wire of Cylinder Head from the Connector-Post on the Main PCB.
- During the removal of the deck mechanism from the main PCB, you could use precision forceps to carefully extract the washer covered with cellophane tape preventing it being lost. Although the washer can be reused if such great care is taken, it is recommended that it is replaced with a brand new washer when the unit is re-assembled. It is therefore a good idea to ensure that these washers are always available from the service center stock.

4. RE-ASSEMBLING PROCEDURE

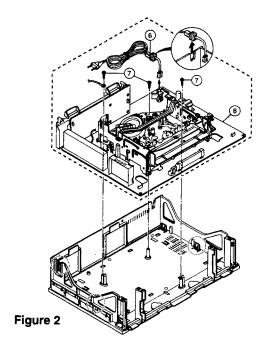

Adjust the position of the "▼" and "▲" mark.

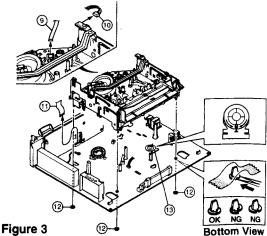

Follow the reverse sequence to the dismantling procedure to re-assemble the unit.

In this manual, illustratic for SUMMARY, Hi-Fi moga-

* Attach the Face Plate with the Dust Cover pushed open.

used. Instruct the same way for the Monaural models.

ELECTRICAL ADJUSTMENT

1. PLAYBACK SWITCHING POINT ADJUSTMENT IN COMMON

Mode

: PLAY

Test Signal

: TPS-13 or 13S

Check Point

: FIP

Adjustment Point

: The adjustment is performed automatically by μ-com.

Adjustment

(1) Playback the test tape and allow the automatic ATR to finish. The ATR is finished when "DT" (Digital Tracking) on the FIP stops blinking. (Figure 1 an arrow)

- (2) Short the connection between PG-DELAY (J208) and GND (J226) on the MAIN PCB (Figure 2 bellow). Then all the segments start blinking (Figure 1). During blinking, μ-com performs the adjustment of the switching point.
- (3) In about 5 seconds, the FIP indicates the counting up status, which is shown on the usual playback mode. It means that the Adjustment of the switching point is completed.
- (4) Clear the TEST POINT short.

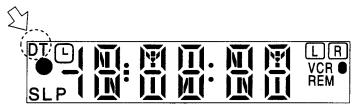

Figure 1

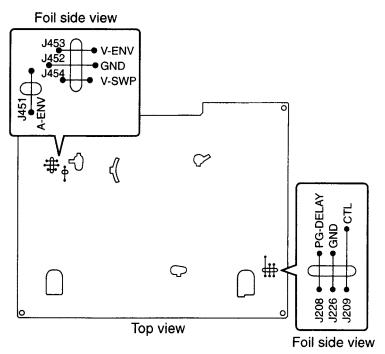

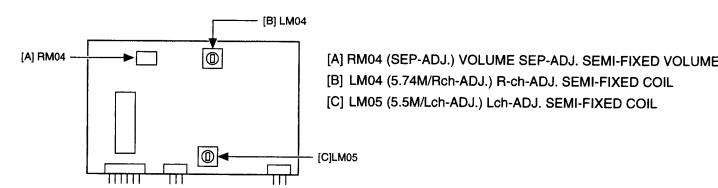

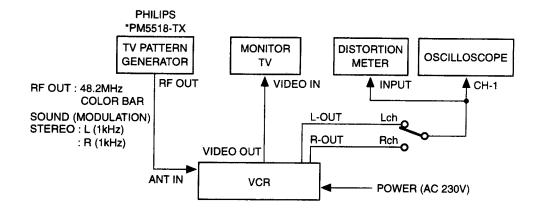

Figure 2

2. AUDIO DISTORTION AND SEPARATION ADJUSTMENT (DUAL PCB)

DUAL PCB BLOCK

Connections:

Settings:

• PM5518-TX

FREQUENCY

: 48.25MHz (2ch): COLOR BAR (PAL)

PATTERN MODULATION

: STEREO L (1kHz) / R (1kHz)

DISTORTION METER

RANGE

: 10mV

OSCILLOSCOPE

TIME / DIV

: 1ms/COUPLING: AC

VOLTS / DIV

: CH-1 = 0.2V

PROBE : 1:1

Adjustment:

(1) Rch (Lch) AUDIO DISTORTION ADJUSTMENT

Receive a signal on 2ch (48.25MHz) and adjust the Semi-fixed coil LM04 (LM05) until the AUDIO OUT distortion is at its lowest level.

Make sure that the distortion level is less than 2%.

(2) SEPARATION ADJUSTMENT

Turn SG (PM5518-TX) MODULATION off for Rch only. Then adjust the Semi-fixed VOLUME RM04 for AUDIO OUT to reduce cross-talk to a minimum.

Make sure that the AUDIO OUT level for Lch at its lowest level.

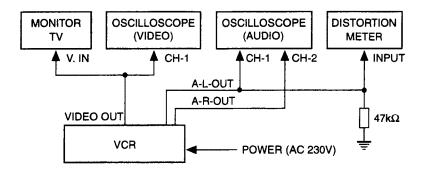

Check that the SEPARATION level is 20dB or higher.

SEPARATION SPEC = 20dB or higher

* This service manual gives examples using the PM5518-TX that is available at the production factory. At service centers, use a TV Pattern Generator, such as, PM5518-TX (PHILIPS) or better, to perform the adjustment shown above.

3. Hi-Fi AUDIO PLAYBACK CHECK

Connections:

Settings:

OSCILLOSCOPE (VIDEO)

TIME / DIV

: 10μs / COUPLING : TV-H

VOLTS / DIV

: 0.2V / PROBE : 1:1

• OSCILLOSCOPE (AUDIO)

TIME / DIV

: 0.5ms / COUPLING : AC : CH-1=0.2V / CH-2=0.2V

VOLTS / DIV PROBE

: 1:1

DISTORTION METER

LEVEL RANGE

: 1V/DISTORTION : 10%

Mode

: PLAY

Test Signal

: PAL HIFI TEST TAPE

VIDEO (COLOR BAR) / AUDIO (Lch=1kHz / Rch=400Hz)

Measuring Equipment

: TWO OSCILLOSCOPES

TV MONITOR

DISTORTION METER

Check Point

: VIDEO = TV MONITOR

AUDIO = OSCILLOSCOPE STEREO INDICATOR (FIP)

Check Method

: (1) Playback the prerecorded, PAL reference Hi-Fi TEST tape and check that the

colour bar is displayed correctly.

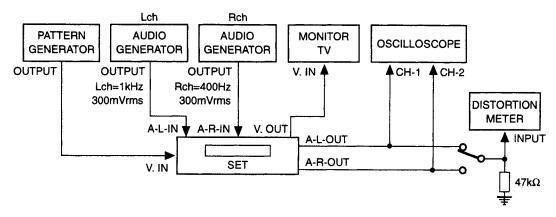

(2) Check that the AUDIO output for Lch is 1kHz and check that the Rch output is

400Hz.

(3) Check that the STEREO L and R INDICATORS light.

4. AUDIO SELF-RECORD AND PLAYBACK CHECK (NORMAL / Hi-Fi)

Connections:

Settings:

• OSCILLOSCOPE

TIME / DIV

: 1 ms

VOLTS / DIV

: CH-1=0.2V / CH-2=0.2V

AUDIO GENERATOR

Lch=1kHz / 300m Vrms / Rch=400Hz / 300m Vrms

• PATTERN GENERATOR

PAL COLOR BAR

Mode

: REC

Test Signal

: VIDEO / PAL COLOR BAR

AUDIO / Lch=1kHz / Rch=400Hz

Measuring Equipment

: OSCILLOSCOPE / TV MONITOR / PATTERN GENERATOR

TWO AUDIO GENERATOR

Check Point

: VIDEO OUTPUT / AUDIO OUTPUT

Check Method

: (1) Record the AUDIO Lch (1kHz) and Rch (400Hz) signals on a blank tape, or an old

tape that can be erased.

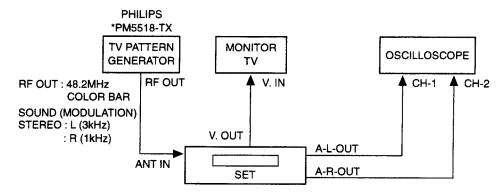

(2) Playback the tape recorded in (1) and check that the sound is normal. Press the AUDIO SELECT key on the remote control and check that the Lch and Rch output

for the STEREO IND. display is as shown below.

Kay Drass	STEREO INDICATOR		AUDIO OUTPUT	
Key Press	Lch	Rch	Lch	Rch
Initial	0	0	1kHz	400Hz
1st	0	×	1kHz	1kHz
2nd	×	0	400Hz	400Hz
3rd	×	×	1kHz + 400Hz	1kHz + 400Hz

5. STEREO AND DUAL FUNCTION CHECK

Connections:

Settings:

PM5518-TX

FREQUENCY : 48.25MHz (2ch) PATTERN : COLOR BAR (PAL)

MODULATION : STEREO or DUAL L (3kHz) / R (1kHz)

• OSCILLOSCOPE

TIME / DIV : 1ms/COUPLING : AC **VOLTS / DIV** : CH-1=0.2V / CH-2=0.2V

PROBE : 1:1

Mode : TUNER 4CH

Test Signal : VIDEO / PAL COLOR BAR

AUDIO / STEREO Lch=3kHz / Rch=1kHz

Measuring Equipment : OSCILLOSCOPE / TV MONITOR / PM5518-TX

Check Point : AUDIO OUTPUTLch / Rch

Check Method : (1) Set the sound for PM5518-TX to STEREO and receive a signal on 2ch (48.25MHz).

Check that STEREO appears on the OSD (for two seconds). Check that the AUDIO OUTPUT for Lch is 3kHz and check that the output for Rch is 1kHz.

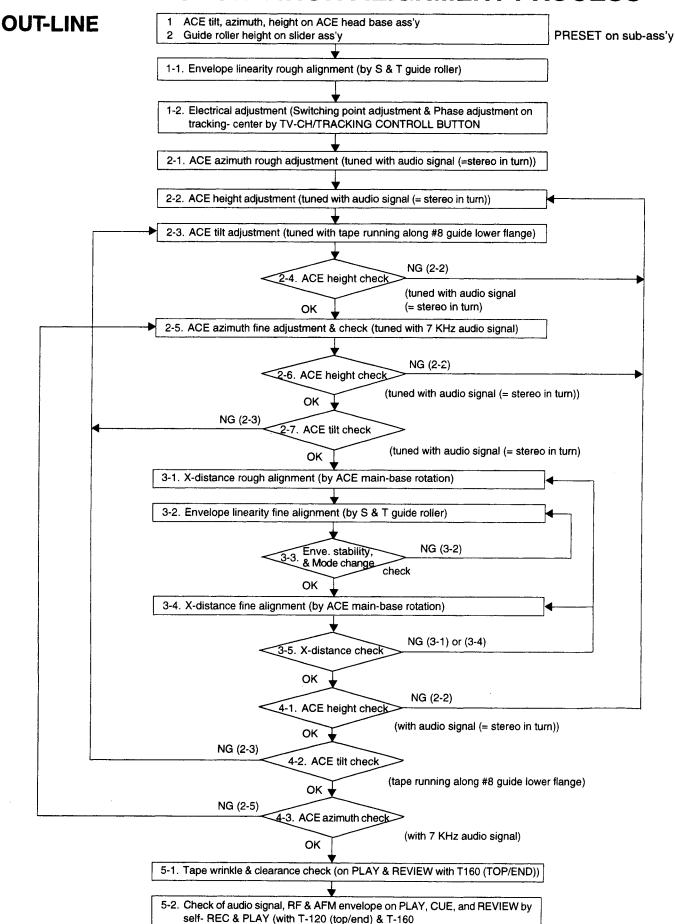

(Check that both the STEREO L and R indicator on the FIP are ON.)

(2) Set the sound for PM5518-TX to DUAL and receive a signal on 2ch (48.25MHz). Check that DUAL appears on the OSD (for two seconds). Check that the AUDIO

OUTPUT for Lch is 3kHz and check that the output for Rch is 1kHz.

(Check that both the STEREO L and R indicator on the FIP are ON.)

TAPE TRANSPORTATION ALIGNMENT PROCESS

DETAIL EXPLANATION

1. PRESET

1-1. Envelope linearity rough alignment

Please playback and check RF-envelope in SP test tape, and make envelope form flat by S & T-guide roller height aligned with slit -driver (on shifted-tracking position by TV-CH/TRACK-ING CONTROLL BUTTON. And adjust to best judge point for envelope).

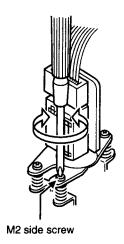

1-2. Electrical adjustment

According to electrical adjustment spec., please adjust switching point.(See page 3)

2. ACE head rough adjustment

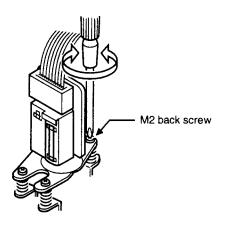

2-1. ACE azimuth rough adjustment (by ACE-side-screw alignment)

Please playback and check audio-signal in test tape, and align ACE-side-screw height roughly make signal maximum.

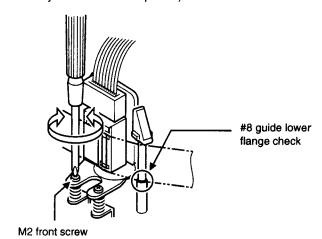

2-2. ACE height adjustment (by ACE-back-screw alignment)

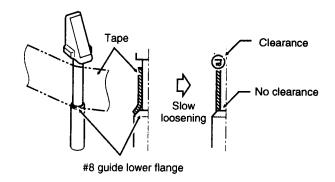

Please playback and check audio-signal in test tape, and align ACE-back-screw height to make signal maximum flat in order to suit ACE-height to tape running height.

2-3. ACE tilt adjustment (by ACE-front-screw alignment)

Please align ACE-front-screw height on CUE or PLAY (CUE is better) to make tape run along #8 guide lower flange. (This process is easer. 1st step: to make tape run below lower flange. 2nd step: to make tape running height higher and higher slowly until wrinkle disapears.)

2-4. ACE height check

By the same process as (2-2) re-check the ACE height. (If NG, refer to (2-2) height adjustment)

2-5. ACE azimuth fine adjustment & check

By ACE-side-screw, please playback and check 7 KHz audio signal (monaural) in test tape, and align ACE-side-screw height to get maximum level of 7 KHz signal.

2-6. ACE height check

By the same process as (2-2) re-check the ACE height. (If NG, refer to (2-2) height adjustment)

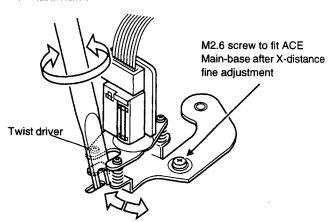

2-7. ACE tilt check

By the same process as (2-3), please check tape running height to #8 guide lower flang as (2-3) process. (If NG, refer to (2-3) Tilt adjustment)

3 Linearity & X-distance adjustment

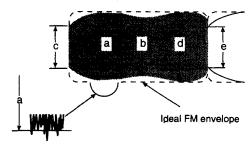

3-1. X-distance rough adjustment

- Connect the CH-1 oscilloscope to TP of V-ENV and CH-2 to TP of CTL. At this time, trigger the oscilloscope externally with the signal (Video Switching Pulse) from TP of V-SWP.
- 2. Play the test tape (Stairstep).
- Use the Channel ▼/▲ buttons to tune the tracking to center position. Adjust point ACE main-base rotation twisted with slit-driver (or mimus-driver) so that the FM envelope output at TP of V-ENV reaches a maximum.

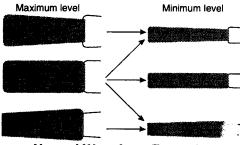

- 4. Using the Channel ▼/▲ buttons. Perform the following 3 steps (5-7) by moving the TP of CTL waveform in both positive (+) and negative (-) directions in 3 ms increments.
- Refer to the figure below. Read the level of portion

 (a) of the waveform. If the waveform is serrated at point (a), adjust the level so that the serrations are as smooth as possible (refer to the figure).

FM Waveform (Maximum Output)

Normal Waveform Examples

6. As shown in the equation below, read the FM waveform value at point (b) and make sure that:

$$\frac{b}{a} \ge 75$$
 or 20 log $\frac{b}{a} \ge -2.5$ dB

Read the values at points (c) and (d) [drum input and output] and make sure that:

$$\frac{c}{a} \ge 0.75$$
 and $\frac{d}{a} \ge 0.75$ or $20 \log \frac{c}{a} = -2.5$ dB and $20 \log \frac{e}{a} = -2.5$ dB

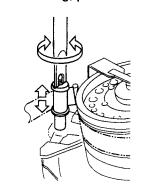

NOTE:

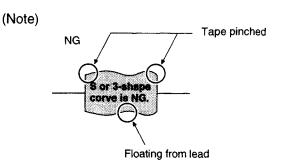

Read the minimum levels for (b), (c), and (d).

3-2. Envelope linearity fine alignment

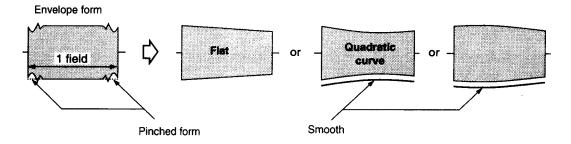

Please playback and check RF-envelope in EP (NTSC) (or LP (CCIR) or SP (SP only set)) test tape, and make envelope form flat by S & T-guide roller (on shifted-tracking position).

- 1. please tighten S & T-guide roller to make RF-envelope around switching point pinched.
- 2. Please loosen S & T-guide roller slowly.
- Please stop loosening at the point, where envelope linearity is flat or loose quadratic curve and envelope is increased and decreased parallelly by trackingshift. If over-loosening, please return (3-2-1).

 Please judge RF-envelope form according to spec. table. If NG, please return (3-2-1). Please do not make linearity in specification unnaturally, please make tape run along drum-lead priority. If NG, please check lead or heads of drum.

3-3. Envelope stability and mode change check

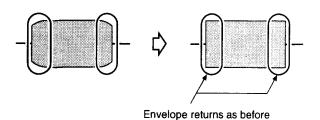

Please judge below mentioned items according to spec. table. If NG, please return (3-2)

1. Envelope stability on PLAY, REVIEW, & CUE mode Envelope fluctuation should be in specification.

 Time until envelope returns as before after modechange (REVIEW → PLAY, STOP → PLAY, loading → PLAY)

Time until envelope returns as before should be in specification.

3-4. X-distance fine adjustment

Please playback and check RF-envelope in EP (NTSC) {or LP (CCIR) or SP (SP only set)} test tape, and make envelope maximum closer to position after (3-1) by ACE main-base rotation (on tracking-center position). After adjustment, please tighten 1 piece of M2.6 screw to fit ACE main-base.

3-5. X-distance check on play-mode on all speeds

Please re-check X-distance as process (3-1) & (3-4). Priority arrangement of X-distance precision is "EP > LP > SP". (If NG (3-1) or (3-4))

And lag time of SP envelope maximum tracking to EP's (LP's on CCIR set) one should be 3 ms or less. If NG, please check height difference between head by head on drum.

4 ACE head re-check

4-1. ACE height re-check (checked by the same process as (2-6))

Please re-check and judge audio height as the same process as (2-6) according to spec. table. (If NG (2-2)height adjustment)

4-2. ACE tilt re-check (by the same process as (2-7))

Please re-check if tape run along #8 guide lower flange as (2-7) If NG (2-3) Tilt adjustment)

4-3. ACE azimuth re-check (by the same process as (2-5))

Please playback 7 KHz audio signal, and judge audio azimuth according to spec. table.

If NG (2-5) azimuth fine adjustment)

If OK, please put down lock tile 601 on tilt & azimuth screw.

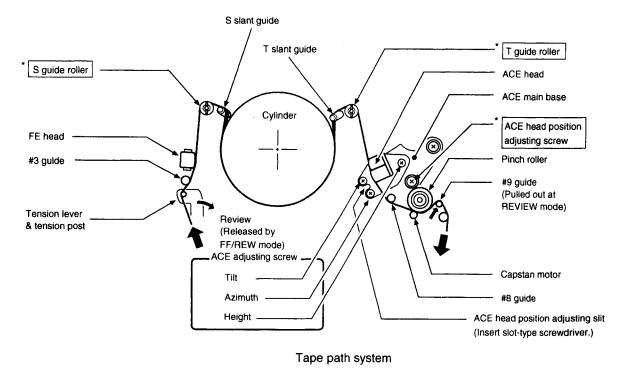

5 Tape wrinkle check etc.

5-1. Tape wrinkle & clearanc∈ an play & review by T160 (TOP/END))

Please check tape wrinkle by T-160 and tape running height along datum guide flange. (check modes: PLAY, CUE, REVIEW check tape position: top & end)

If transport has big wrinkle to damage, please check tension and guide inclination & height. If tape does not run along datum guide flange, please align again or check guide precision.

CHECK POINTS	Forward	Reverse	Necessary condition
#3 guide lower flange	important check	without	no damage
S guide roller upper	check	important check	no clearance & no damage
T guide roller upper	important check	check	no clearance & no damage
#8 guide lower flange	important check	check	no damage
#8 guide upper flange	important check	check	clearance on play/no damage
#8 ~ Capstan tape twist	important check	important check	no twist or small twist
#9 guide upper & lower	without	important check	no damage

5-2. Check of audio signal, RF & AFM envelope

Please check audio signal, RF & AFM envelope on PLAY, CUE, and REVIEW according to specification table by self-REC & PLAY with T-120 (top/end) & T-160 (top/end).

PERIODIC MAINTENANCE

The following procedures are recommended for maintaining optimum performance and reliability of this video cassette recorder.

CLEANING

For cleaning, use a lint-free cloth or gauze dampened with alcohol.

TAPE TRANSPORT SYSTEM

- 1. The tape transport system components should be cleaned after every 500 hours of use.
- 2. Since the above parts come in direct contact with video tape, they tend to collect dust particles. If allowed to accumulate, dust may lead to damage to the video tape and above parts.
- 3. After cleaning with alcohol, allow the parts to dry thoroughly before using a cassette tape.

NOTE:

- When cleaning the video heads on the upper drum, do not clean them with a vertical stroke.
- Use only a gentle back and forth motion in the direction of the tape path.

REEL DRIVE SYSTEM

- 1. The reel drive system components should be cleaned after every 1000 hours of use.
- 2. The above revolving parts are of rubber or come in direct contact with rubber parts. Dust on rubber accumulates and interferes with proper operation.
- Avoid using excessive alcohol when cleaning rubber parts.

SERVICE SCHEDULE FOR MAIN COMPONENTS

The following table lists the parts which should receive periodic servicing at the recommended intervals.

Def M	Daw Na	No. Description	Periodic Service Schedule (operating hours)				
Het. NO	Ref. No Part No.	Description	1000	2000	3000	4000	5000
G001	67D70311921	Cylinder Ass'y for 2 Head Deck No.59502	0	•	0	•	0
G001	67D70311920	Cylinder Ass'y for 4 Head Deck No.59503	0	•	0	•	0

K110	67D70331600	Disk, S Reel			0		
K140	67D70331601	Disk, T Reel			0		

Standard Service Periods

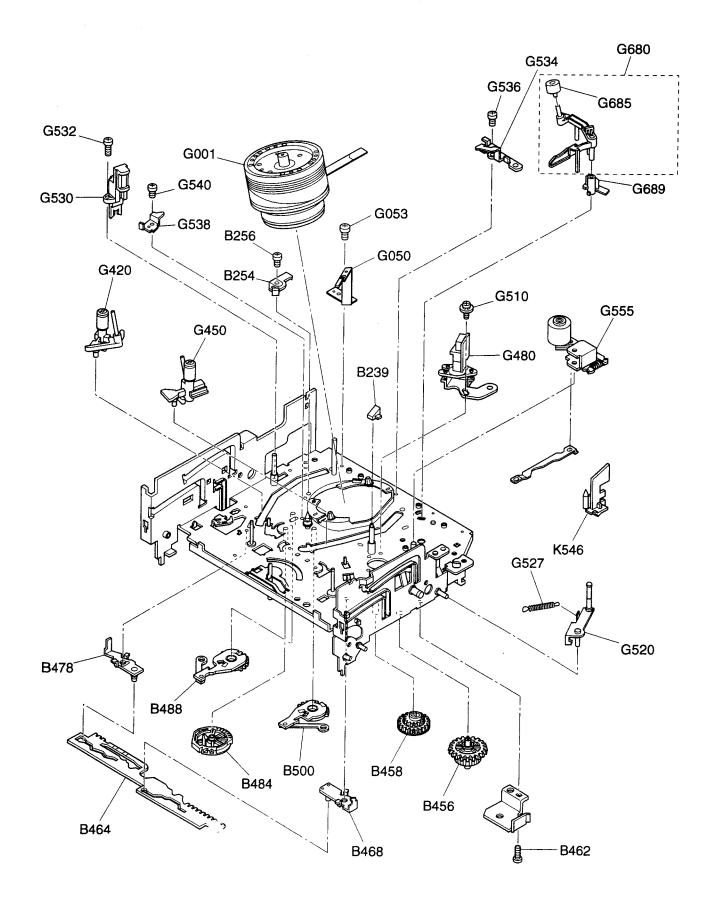

- Check and replace if necessary
- Replace

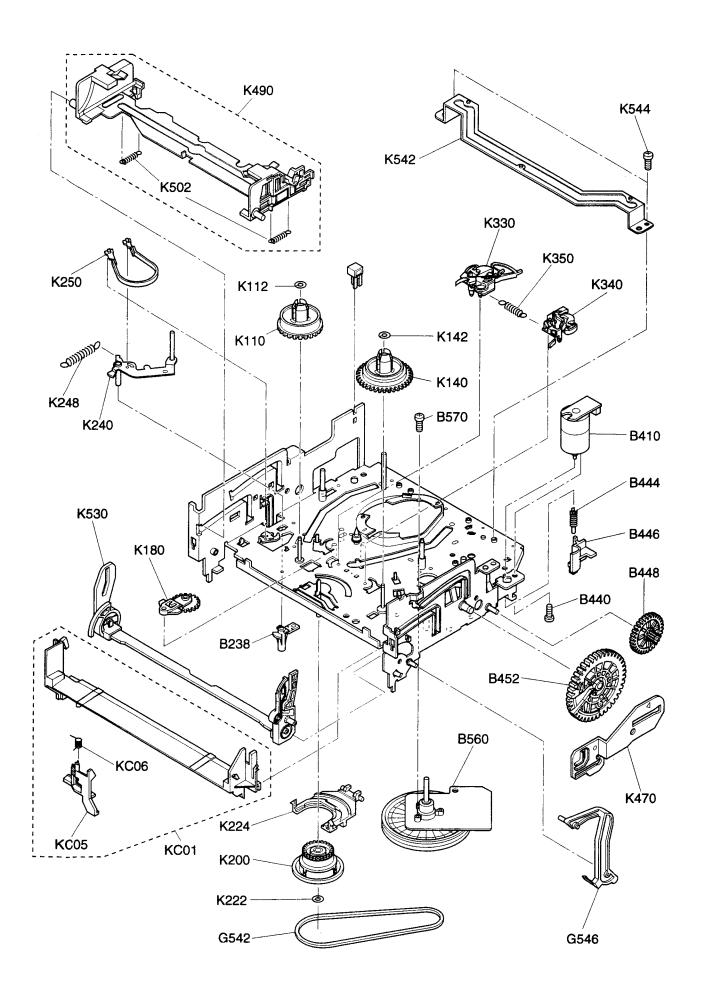

NOTE:

Cleaning and replacement of the belts should be undertaken every 2 years even if the unit is not used frequently.

When replacing a function switch (POWER, PLAY, STOP/EJECT, FF, REW) whose position differs according to face type, you can re-install the switch at its original position by noting the location where the switch was removed on the model to be repaired. This manual therefore doesn't give the switch layout for each type, but rather gives one type as an example. Sub circuit boards are not used for models where all function switches are positioned on the main circuit board. When ordering the function switch parts, indicate the Part No. 23A11620 regardless of the type.

SCHEMATIC DIAGRAM (REAR SUB) FOR Hi-Fi MODEL

5. IC, TRANSISTOR LEAD IDENTIFICATION

6. CABINET & CHASSIS ASSEMBLY

- The figure of the parts Nos, ⑤, ⑫, ⑳, ㉑ differ a little from each models.
- Parts No, ② is specific to 2 scart models. But for the 1 scart models, the scart connector located directly on the Main PCB.

During the removal of the deck mechanism from the main PCB, you could use precision forceps to carefully extract the washer covered with cellophane tape preventing it being lost. Although the washer can be reused if such great care is taken, it is recommended that it is replaced with a brand new washer when the unit is re-assembled. It is therefore a good idea to ensure that these washers are always available from the service center stock.

13. PC BOARD ASS'Y (KEY-L, R) PARTS LOCATION FOR MONAURAL MODEL

KEY-L

KEY-R

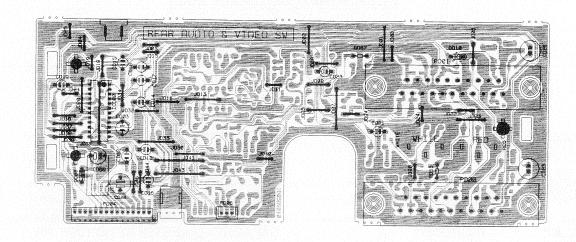

When replacing a function switch (POWER, PLAY, STOP/EJECT, FF, REW) whose position differs according to face type, you can re-install the switch at its original position by noting the location where the switch was removed on the model to be repaired. This manual therefore doesn't give the switch layout for each type, but rather gives one type as an example. Sub circuit boards are not used for models where all function switches are positioned on the main circuit board. When ordering the function switch parts, indicate the Part No. 23A11620 regardless of the type.

KEY-R

When replacing a function switch (POWER, PLAY, STOP/EJECT, FF, REW) whose position differs according to face type, you can re-install the switch at its original position by noting the location where the switch was removed on the model to be repaired. This manual therefore doesn't give the switch layout for each type, but rather gives one type as an example. Sub circuit boards are not used for models where all function switches are positioned on the main circuit board. When ordering the function switch parts, indicate the Part No. 23A11620 regardless of the type.

^{*} The voltages listed above include a +-10% tolerance.

SERVICE NOTE

Procedure for Initializing the EEPROM

- 1. Replace the EEPROM (IC702).
- 2. Install the board/DECK on the chassis.
- 3. Turn ON the AC power supply to the set, and then turn OFF the POWER to the set.
- 4. Short circuit the PG DELAY terminal (J208) of the test jumper on the MAIN board with the GND terminal (J226) so that the FIP lights up (approximately 2 seconds). (Figure 1)
- 5. When the FIP lights up, initialization of the EEPROM starts. (Figure 2)
- 6. After initialization ends, the FIP returns to the normal POWER OFF mode. (Figure 3)
- 7. Clear the TEST POINT short.
- 8. Initialization is now finished.
